CAUTION: All material included in these charts is advisory only, and its use by anyone is voluntary. In developing this information, Fastenal has made a determined effort to present its contents accurately. Extreme caution should be used when using a formula for torque/ tension relationships. Torque is only an indirect indication of tension. Under/over tightening of fasteners can result in costly equipment failure or personal injury.

## ALLOY STEEL LOW HEAD SOCKET HEAD CAP SCREW

| Nominal Size |  | Alloy Steel Socket Head Other Configurations Torque (in-Ibs.) |  |  |  |

| 7/8 | 0.875 | 5750 | - | - | - |
| 1 | 1.000 | 8000 | - | - | - |

## NOTES:

1) The torque values can only be achieved if nut or tapped hole has a proof load greater than or equal to the bolt's minimum tensile strength.
2) For A307A, J429 Grade 5 and 8, FNL Grade 9, EcoGuardm, A574, A193 B7, Class 4.6, 8.8, 10.9, and 12.9 externally thread fasteners and Prevailing Torque All-Metal Nut chart, the torque values were calculated from the formula Torque=KDF, where
K is the estimated torque coefficient
(for full details contact engineer@fastenal.com).
$\mathrm{K}=0.12$ when using EcoGuard ${ }^{\text {mow }}$ coated nut, bolt and washer
$\mathrm{K}=0.15$ for "lubricated" conditions including EcoGuardm, some oil, tapping fluid, etc. $K=0.17$ for some anti-seize, thread lockers, and some plain conditions
$K=0.20$ for zinc and dry conditions
$K=0.12$ is listed for A193 B7, which would be used for some general PTFE coatings When using zinc plated lubricated with wax prevailing torque lock nuts, the $K$ value can vary between $0.12-0.18$. Use Prevailing Torque All-Metal Nut chart if using this style of nut.
D = Nominal Diamete
F = Clamp Load
For J429 Grade 5 and 8, FNL Grade 9, A574, Class 4.6, 8.8, 10.9 and 12.9, the clamp loads are listed at $75 \%$ of the proof loads specified by the standard. For A307 Grade A, 75\% of 36,000 PSI is utilized. A193 B7 uses $75 \%$ of the yield strength. The prevailing torque lock nut clamp loads are listed at $75 \%$ of the proof loads specified for the appropriate grade bolt: Grade C - SAE J429 Grade 8, FNL Grade 9 - FNL Grade 9 bolt, Grade F - SAE J429 Grade 5, Grade G - SAE J429 Grade 8.

## 3) With the exception of the F835 Countersunk and Button Head, Alloy Steel Socket Shoulde

 and Alloy Steel Low Head Socket Head Cap Screw, torque values for inch seriescharts up through and including $5 / 16$-in diameter are in inch-pounds; diameters $3 / 8$-in and larger are in foot-lbs. Torque values for metric fasteners up through and including
M8 are in inch-pounds; diameters M10 and larger are in foot-lbs.
4) Torque values for F835 Countersunk and Button Head, Alloy Steel Socket Shoulder and Alloy Steel Low Head Socket Head Cap Screw are given for "as-received" screws in
rigid joints when torqued with standard hex keys; all are listed in inch-pounds.
5) Stainless Steel and Non-Ferrous are suggested maximum torque values based on actual lab testing.
6) Stainless steel fasteners tend to gall while being tightened. The risk of galling or thread
seizing can be reduced by: using lubrication, tightening fasteners with low RPMs and
without interruptions, applying only light pressure, and avoiding prevailing torque lock
nuts when possible.
CONVERSION FACTORS:
To convert inch-pounds (in-lbs) to Newton meters (Nm), multiply by 0.113
To convert foot-pounds (ft-lbs) to Newton meters (Nm), multiply by 1.35
To convert pounds (lbs) to Newtons (N), multiply by 4.448
To convert inches (in) to millimetres ( mm ), multiply by 25.4
Note: When using Zinc Plated (lubricated with wax) Top Lock Nuts, the K value can vary between 0.12-0.16.
